

In 1988 Cormach first pioneered drywall deliveries into high-
rises with the introduction of the 30000 WB series, capable rises with the introduction of the 30000 WB series, capable
of reaching heights over 85 feet. Seven years later a smaller wallboard boom was manufactured and put into production to complete in the residential and smaller commercial job market. After six years this cranes was redesigned and an updated boom evolved. With three years in the field a new redesigned work horse evolved into the present 30000 WB
series booms on the market today. For over twenty years Cormach has evolved their wallboard product line into a faster, smoother operating, more efficient and service friendly boom. These modifications have made Cormach the North American front runner in drywall and building material delivery booms. Cormach has now taken the high-lift wallboard boom to the next level with the 50000 WB series. We are proud to offer the next generation of high lift wallboard booms. Using the techical knowledge of both the drywall industry of North America and other European markets, Cormach has developed the talest, strongest and shortest stowed boom on the market today. Only Cormach uses the rotation bearing and turret system on their complete product line that other manufacturers only use on their,larger knuckle booms. The twin column turret design dissipates the lifting stresses and shock loads evenly onto es unavoidable points of concentrated stresses at the upper bushings associated with other crane manufacturers designs.

Cormach cranes have continuous rotation as a standard. This is not possible with a rack and pinion rotation system offered by other crane manufacturers.
The simplistic design of the column aids in safety and mainte nance inspections as all stressed parts are visible and wear is measurable. All components can be extracted with minimum gear box, spur gear and motor - no other parts need to be touched. One ring of bolts - all accessible - parts the entire turret and boom structure from the rotation bearing
The control station offers extreme comfort by positioning the operator into a recumbent position. The complete information system and controls are within easy access of the operator.

Radio Remote Control Ready, fully proportional Danfoss valves give the Cormach crane the smooth fluid like motion when operated.
Increased productivity-
The extension cylinders incorporate a regenerative system which increases the speed by almost $\mathbf{5 0 \%}$ and reduces heat generated in the hydraulic system. This is accomplider without going through the pump and entire hydraulic system.

Cormach wallboard cranes hydraulic system operate at 350 psi on the 30000 WB series and 4692 psi on th servoir along with a variable displacement, load sensing pump that supplies hydraulic fluid on demand ( 26 gpm maximum). This too reduces the amount of the heat that is generated in the hydraulic system. It further allows the rated simultaneously. as any or all rated simultaneously
An electro-hydraulic type of load limiting device controls the lifted load of the crane. It only cuts off the movements that inble buzzer inform the operator when the crane is in overload. Technical data:

| Model: | 30000 WB | 50000 WB |
| :--- | :---: | :---: |
| Series: | $45-55-65$ | $80-87-95$ |
| Lifting Moment (ft/lbs): $279.250-258,270($ WB65 ) | 464,663 |  |

Horizontal Reach: $45^{\prime} 3^{\prime \prime}-54^{\prime} 11^{\prime \prime}-65^{\prime} 10^{\prime \prime}$ (W65) 464,663
