SCRAPER SYSTEMS

Our fully integrated tractor-scraper systems move more dirt than self-propelled scrapers or competitive tractors and scrapers, at one-third the initial investment and half the labor. All models deliver more power to handle our larger-capacity ejector scrapers and our efficient, economical carry-all scrapers.

Save more per cubic yard

Our scraper systems will help you save up to 50 cents per cubic yard over conventional earthmoving equipment, such as self-propelled scrapers.

Consistently full loads, fewer passes

Ramp up productivity with exclusive AutoLoad™. Even inexperienced operators will deliver consistently full loads with fewer passes using automatic blade raise/lower.

More power to pull more

All of our Scraper Special tractors boast more horsepower, from 346 kW (470 hp) on our 9470R and 9470RT, and up to 456 kW (620 hp) on our new 9620R — our largest Scraper Special tractor ever. Increased power allows these tractors to pull more and larger scrapers — to move more material with faster cycle times.

Backed to the max

We've doubled our warranty on scrapers to an industry-leading 12 months. Tractors are backed by our two-year/2,000-hour warranty.

Increased payload capacity

All ejector scrapers deliver more payload capacity — up to 14-percent more on the 2412D E. And now you are no longer restricted from running our larger scrapers in a triple-pan configuration. That means you can haul up to 54.9 m³ (72 cu. yd.) per cycle with only a single operator.

Two-tire ejector scrapers

2010D E and 2412D E two-tire ejector scrapers shed mud better in soft ground conditions and provide greater stability on uneven ground. Less rolling resistance minimizes wear and fuel usage. Easier to service, too.

Maximum productivity, minimum fatigue

AutoLoad automatically varies blade height, automates loading operation, and keeps a consistent spreading height. Automating key functions maximizes productivity, while minimizing operator fatigue, error, and wear and tear on the tractor.

Get up to speed fast

AutoLoad delivers smooth cuts that only highly experienced operators can duplicate. No special training required, so operators become proficient quickly.

Consistently full loads

Whether it's set up to leave a desired cut profile or to load over a specified distance, you'll get reliably full loads all day long.

Set-and-forget

The operator can set-and-forget each scraper's upper and lower limits, for consistent loading and unloading, resulting in faster cycle times.

Easy, fingertip control

New Generation 4 CommandCenter™ provides simple touchscreen control of AutoLoad. On-screen help and intuitive set-up make it fingertip-easy to set cut profiles, load distances, and scraperload sensitivity entering the cut — for optimal performance in a variety of soil conditions.

Fully automatic transmission

New e18™ PowerShift™ transmission uses enhanced Efficiency Manager to automate shifts and throttle control, maximizing power and helping reduce fuel consumption by up to 12 percent.

Stronger front frame

The front frame is 10-percent stronger to accommodate higher horsepowers and larger loads. Cast rear structural axle assembly is 30-percent stronger, creating an exceptionally durable platform for carrying up to 54.9 m³ (72 cu. yd.) of material.

HydraCushion reduces fatigue

Exclusive HydraCushion suspension option (standard on the 9620R) virtually eliminates the road lope experienced during transport at high speeds and the power hop common at slower speeds under draft load, boosting productivity with less fatigue.

Better line holding at high speeds

Exclusive ActiveCommand Steering option improves line holding with minimal correction, for greater control and less fatigue when traveling at high speed down long haul roads.

Auto diff-lock improves traction

Activated by a pushbutton on the CommandARM™, auto diff-lock steering angle is adjustable from two to eight deg., depending on jobsite conditions. It stays engaged until the tractor turns or reaches 22.5 kph (14 mph), and re-engages when the tractor returns to a straight line or drops below 19.3 kph (12 mph), improving traction and reducing tire wear.

Match tires to jobsite conditions

Our rubber-tire models thrive in topsoil, clay, and gumbo. With numerous tire and ballast options, you can fine-tune weight and balance to match jobsite conditions.

Smooth operator

A John Deere exclusive, the optional ActiveSeat[™] isolates an operator from 90 percent of vertical seat movement, for the smoothest ride on any scraper tractor (not available on tracked tractors).

High-flow hydraulics

Optional high-flow hydraulics (standard on tracked models) with 19.1-mm (0.75 in.) couplers provide an industry-leading 435 Lpm (115-gpm) flow, for increased hydraulic response when operating multiple scrapers. With higher flow, operators will be able to run a multitude of functions on multiple units faster, reducing cycle times and increasing production.

Smooth shifting, intuitive control

Enhanced e18-speed automatic PowerShift transmission with new Efficiency Manager delivers smooth shifting and intuitive control for operators of all skill levels. Three modes of operation — full auto, custom, and manual — allow operators to match desired groundspeed to job conditions.

Fluid efficient, reliable FT4 engines

Rugged FT4/Stage IV PowerTech™ and Cummins® diesel engines meet rigid emission regulations, enabling you to work, wherever there's work — even in nonattainment areas. Our field-proven technology is simple, fluid efficient, fully integrated, and fully supported. It employs cooled exhaust gas recirculation (EGR), easy-to-maintain high-uptime exhaust filters, and selective catalytic reduction (SCR).

Efficient Vari-Cool™ system

Unique Vari-Cool system employs a large grille, multiple louvers, and variable-speed fan for generous airflow through the heavy-duty coolers. Patented fan operates at the slowest speed necessary, for maximum cooling, horsepower, and fuel efficiency.

Operate in quiet comfort

New CommandView III cab is even quieter, thanks to laminated glass and acoustical barriers in the front console that help reduce vibration. A passive noise-reduction system, double-lip door seals, insulated exhaust, and numerous other acoustical barriers also help keep things quiet.

Seat rotates for better visibility

For a nearly unobstructed view of the scraper or implement, rotate the seat 40 deg. to the right. Optional right-hand side-window wiper keeps the view clear of rain and mud.

Easy-to-use touchscreen display

Completely redesigned CommandCenter display features a faster processor, a standard high-resolution touchscreen for easy-on-the-eyes clarity, and simple-to-navigate menus for access to a wealth of vital performance information and service alerts.

Comfortable and in control

CommandView III cab boasts plenty of room for the operator, comfortable fingertip control, and numerous places to stow a cooler, cell phone, MP3 player, and other carry-ons. Opt for an in-cab refrigerator to store beverages and lunch.

Automatic sequencing reduces fatigue

Intelligent Total Equipment Control (iTEC™) decreases operator fatigue and increases productivity through automatic sequencing of tractor/scraper functions. An operator can quickly and easily program up to four learned sequences — each capable of storing up to 20 tractor functions, for effortless pushbutton multifunction control.

CARRY-ALL SCRAPERS

EFFICIENT, ECONOMICAL EARTHMOVING.

Carry-all scrapers are some of the best sand-loading scrapers you can run. Choose them for land leveling, terracing, digging ponds, building levees, and general site prep.

Stable, precise finish grading

Optional precision land-leveling kit stabilizes the scraper and eliminates "duck walking," allowing precise, highspeed finish grading with a carry-all bucket. From rough cut to final grade without configuration changes.

Strong, unobtrusive cross tube

High-clearance cross tube provides blade visibility and unsurpassed strength.

Strong, durable gate cylinder

Large 152-mm (6 in.)-diameter gate cylinder provides rugged durability and plenty of material-clamping force

More capacity, less spillover

Optional super-overflow spill guard adds more capacity and prevents spillover behind the bucket, maximizing productivity while minimizing tire wear and poor fuel efficiency.

Fast, easy connection

Push/pull breakaway couplers for 19.1-mm (0.75 in.) hoses simplify and speed connection to optional high-flow hydraulics. Rear quick-attach hitch option lets you quickly connect or disconnect tandems without tools.

Agile in tough conditions

Generous ground clearance and low ground pressure keep you moving, even in less-than-ideal conditions.

Faster, cleaner unloading

With a wide 1397-mm (55 in.) throat opening, the fast-dump bucket rotates a full 70 deg. for cleaner unloading and less material carryback.

PENNY PINCHERS

MAXIMIZE UPTIME. MINIMIZE COST.

Easy, extended service intervals

Vertical filters allow quick, no-spill changes. Service interval is 250 hours (500 hours with John Deere Plus-50™ II oil) for the engine and 1,500 hours for transmission, hydraulics, and axles.

Wide open, ground-level servicing

Hood raises up and away, providing wide-open access to radiator, charge-air, transmission, hydraulic, and A/C condenser coolers for easy clean-out. Daily servicing can be performed from ground level.

Quick, simple cutting-edge swap-out

Need to change a cutting edge? Bucket, gate, and scraper mainframe can be easily secured without tools in the raised position for servicing.

Shields and guards protect components

Rounded gate shields and swept-back super-overflow spill guard protect components from falling material to prevent debris like rocks and tree roots from accumulating.

More time between fill-ups

Larger 1514-L (400 gal.) fuel capacity (1324 L [350 gal.] on tracked models) and ample diesel exhaust fluid (DEF) tanks let you work longer between fillups. Wide filler neck speeds refueling.

Rugged ejector shielding

Ejector shielding has been beefed up to better protect hydraulic lines, wire harnesses, and other critical components.

Easy-to-service DPF

Ash-service intervals for the diesel particulate filter (DPF) are condition based, meaning the machine will notify the operator before service is required. Typically, ash service is not necessary until the first engine overhaul. Machine application, regular maintenance practices, and type of lubricating oil impact ash-service intervals.

Two-tire scraper options

Two-tire options track and shed material better in soft ground conditions, with less productivity-killing carryback. Provide more side-to-side stability on uneven ground, too.

Keep downtime down with

ULTIMATE UPTIME

Ultimate Uptime, featuring John Deere WorkSight, is a customizable support solution available exclusively from your Deere dealer. This flexible offering maximizes equipment availability with standard John Deere WorkSight capabilities that can help prevent future downtime and speed repairs when needed. In addition to base John Deere WorkSight features, our dealers work with you to build an uptime package that meets the specific needs of your machine, fleet, project, and business, including customized maintenance and repair agreements, onsite parts availability, extended warranties, fluid sampling, response-time

Get valuable insight with

JOHN DEERE WORKSIGHT™

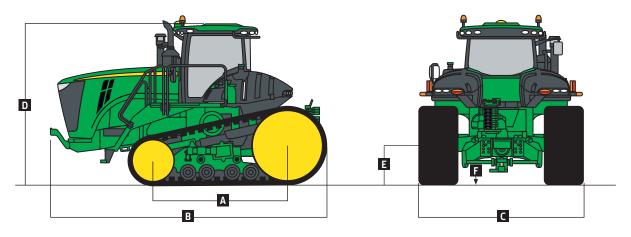

John Deere WorkSight is an exclusive suite of telematic solutions that increases uptime while lowering operating costs. At its heart, JDLink™ Ultimate machine monitoring provides real-time data and health prognostics to suggest maintenance solutions that decrease costly downtime. Remote diagnostics enable your dealer to read codes, record performance data, and even update software without a trip to the jobsite.
